Digestive Problems

Clasado, manufacturer of Bimuno, recommends the product for feeding and supporting the body's immunity boosting bacteria. Clasado chief executive officer Graham Waters says: "The gut controls 60 per cent of the body's immune function and influences health. Recent gastrointestinal virus outbreaks emphasise the need to take gut health more seriously. Bimuno is clinically proven to help boost our bodies' self defence". According to Clasado, research conducted at the University of Reading shows that 5.5g of Bimuno per day can "significantly" boost natural levels of "good" bacteria, including Bifidobacteria and reduce levels of pathogenic bacteria. Bimuno is a soluble prebiotic that can be added to food and drink or used in cooking. It is available in packs of 30 sachets (5.5g, £6.99). For further information go to www.bimuno.com.
